# Enhanced NIMC Verification System

Name	Basic Steps
<a href="#"><u>Enhanced NIMC Verification System (eNVS)</u></a>	<ol style="list-style-type: none"><li>1. Establish connection to the service via VPN</li><li>2. Call the createToken method using username, password and orgID.</li><li>3. From the returned token object, use the loginString component to make subsequent calls</li></ol> <p>Note: Tokens expire after a time period, thus the createToken method has to be called again to get a fresh token.</p>

## Methods: eNVS

Name	Description
<a href="#"><u>changePassword</u></a>	Enables authenticated user to change password
<a href="#"><u>createToken</u></a>	Enable the creation of a one-time token which expires after a set period of time Method returns a token Object
<a href="#"><u>createTokenString</u></a>	Enable the creation of a one-time token which expires after a set period of time Method returns a token String
<a href="#"><u>getPermissionByLevel</u></a>	Retrieve permission associated to a login in user in terms of what demographic He can access
<a href="#"><u>searchByDemo</u></a>	Enables identification using demographic (surname, firstname and DoB)
<a href="#"><u>searchByDemoPhone</u></a>	Enables identification using telephone number
<a href="#"><u>searchByDocumentNumber</u></a>	Enables verification using Document number (1:1 search)
<a href="#"><u>searchByFinger</u></a>	Enables Identification search using a single fingerprint and its position
<a href="#"><u>searchByFingerR</u></a>	Enables identification search using a fingerprint in situation where its position is unknown. It's a finger recursive search
<a href="#"><u>searchByNIN</u></a>	Enables identification by NIN
<a href="#"><u>updateUserSELF</u></a>	Enables authenticated user to update self account parameter. E.g names, phone etc
<a href="#"><u>verifyFingerWithData</u></a>	Enables verification using nin and a fingerprint in which position is known

## Method: changePassword

### Parameters

Name	Type	Direction	Description
token	string	Input	Token acquired during one time login
newpassword	string	Input	Hash of the new password to be reset to

### Returns

A [return](#) element having the structure defined by the following table.

Name	Type	Description
<a href="#">loginObject</a>	<a href="#">loginObject</a>	
<a href="#">loginString</a>	string	

## Method: createToken

### Parameters

Name	Type	Direction	Description
username	string	Input	
password	string	Input	
orgid	string	Input	

### Returns

A [return](#) element having the structure defined by the following table.

Name	Type	Description
<a href="#">loginObject</a>	<a href="#">loginObject</a>	
<a href="#">loginString</a>	string	

## Method: createTokenString

### Parameters

Name	Type	Direction	Description
username	string	Input	
password	string	Input	
orgid	string	Input	

### Returns

A [return](#) element.

## Method: getPermissionByLevel

### Parameters

Name	Type	Direction
token	string	Input
level	int	Input

### Returns

A [return](#) element having the structure defined by the following table.

Name	Type
<a href="#">atype</a>	accessType
<a href="#">batchid</a>	boolean
<a href="#">birthcountry</a>	boolean
<a href="#">birthdate</a>	boolean
<a href="#">birthlga</a>	boolean
<a href="#">birthstate</a>	boolean
<a href="#">cardstatus</a>	boolean
<a href="#">documentno</a>	boolean
<a href="#">educationallevel</a>	boolean
<a href="#">email</a>	boolean
<a href="#">employmentstatus</a>	boolean
<a href="#">gender</a>	boolean
<a href="#">heighth</a>	boolean
<a href="#">maritalstatus</a>	boolean
<a href="#">message</a>	string
<a href="#">names</a>	boolean
<a href="#">nin</a>	boolean
<a href="#">nok_address</a>	boolean
<a href="#">nok_names</a>	boolean
<a href="#">nspokenlang</a>	boolean
<a href="#">ospokenlang</a>	boolean
<a href="#">photo</a>	boolean
<a href="#">pnames</a>	boolean
<a href="#">profession</a>	boolean
<a href="#">religion</a>	boolean
<a href="#">residence_address</a>	boolean
<a href="#">residencestatus</a>	boolean
<a href="#">self_origin_lga</a>	boolean
<a href="#">self_origin_place</a>	boolean
<a href="#">self_origin_state</a>	boolean

Name	Type
<a href="#"><u>signature</u></a>	boolean
<a href="#"><u>telephoneno</u></a>	boolean
<a href="#"><u>title</u></a>	boolean
<a href="#"><u>userID</u></a>	boolean

## Method: searchByDemo

### Parameters

Name	Type	Direction
token	string	Input
DemoDataMandatory	<a href="#">demoDataMandatory</a>	Input

### Returns

A [return](#) element having the structure defined by the following table.

Name	Type
<a href="#">data</a>	<a href="#">demoData</a>
<a href="#">returnMessage</a>	string

## Method: searchByDemoPhone

### Parameters

Name	Type	Direction
token	string	Input
DemoDataMandatory	string	Input

### Returns

A [return](#) element having the structure defined by the following table.

Name	Type
<a href="#">data</a>	<a href="#">demoData</a>
<a href="#">returnMessage</a>	string

## Method: searchByDocumentNumber

### Parameters

Name	Type	Direction
token	string	Input
doc	string	Input

### Returns

A [return](#) element having the structure defined by the following table.

Name	Type
<a href="#">data</a>	<a href="#">demoData</a>
<a href="#">returnMessage</a>	string

## Method: searchByFinger

### Parameters

Name	Type	Direction
token	string	Input
data	string	Input
FingerPositionCode	<a href="#">FingerPositionCode</a>	Input

### Returns

A [return](#) element having the structure defined by the following table.

Name	Type
<a href="#">data</a>	<a href="#">demoData</a>
<a href="#">returnMessage</a>	string

## Method: searchByFingerR

### Parameters

Name	Type	Direction
token	string	Input
data	string	Input

### Returns

A [return](#) element having the structure defined by the following table.

Name	Type
<a href="#">data</a>	<a href="#">demoData</a>
<a href="#">returnMessage</a>	string

## Method: searchByNIN

### Parameters

Name	Type	Direction
token	string	Input
nin	string	Input

### Returns

A [return](#) element having the structure defined by the following table.

Name	Type
<a href="#">data</a>	<a href="#">demoData</a>
<a href="#">returnMessage</a>	string

## Method: updateUserSELF

### Parameters

Name	Type	Direction
token	string	Input
nin	string	Input
surname	string	Input
firstname	string	Input
phone	string	Input
email	string	Input

### Returns

A [return](#) element having the structure defined by the following table.

Name	Type
<a href="#">approved</a>	string
<a href="#">asaid</a>	string
<a href="#">authenticated</a>	boolean
<a href="#">defaultpassword</a>	string
<a href="#">demoPermission</a>	<a href="#">demoMapPermission</a>
<a href="#">email</a>	string
<a href="#">expireTime</a>	long
<a href="#">firstname</a>	string
<a href="#">loginExpiryTimeInMinutes</a>	int
<a href="#">message</a>	string
<a href="#">nin</a>	string
<a href="#">orgaddress</a>	string
<a href="#">orgid</a>	string
<a href="#">orgname</a>	string
<a href="#">phone</a>	string
<a href="#">requestTypePermission</a>	<a href="#">requestType</a>
<a href="#">status</a>	string
<a href="#">surname</a>	string
<a href="#">type</a>	string
<a href="#">userid</a>	string
<a href="#">username</a>	string

## Method: verifyFingerWithData

### Parameters

Name	Type	Direction
token	string	Input
nin	string	Input
fingerStringInBase64	string	Input
pos	int	Input

### Returns

A [return](#) element having the structure defined by the following table.

Name	Type
<a href="#">data</a>	<a href="#">demoData</a>
<a href="#">returnMessage</a>	string

## Complex Types: Enhanced IdentitySearch

## **Element: token [type searchByDemoPhone]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">searchByDemoPhone</a>	Complex Type
<a href="#">searchByDemoPhone</a>	Method

### **Definition**

[See searchByDemoPhone](#)

## **Element: token [type searchByDocumentNumber]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">searchByDocumentNumber</a>	Complex Type
<a href="#">searchByDocumentNumber</a>	Method

### **Definition**

[See searchByDocumentNumber](#)

## **Element: token [type searchByFinger]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">searchByFinger</a>	Complex Type
<a href="#">searchByFinger</a>	Method

### **Definition**

[See searchByFinger](#)

## **Element: token [type searchByFingerR]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">searchByFingerR</a>	Complex Type
<a href="#">searchByFingerR</a>	Method

### **Definition**

[See searchByFingerR](#)

## **Element: token [type searchByNIN]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">searchByNIN</a>	Complex Type
<a href="#">searchByNIN</a>	Method

### **Definition**

[See searchByNIN](#)

## **Element: token [type updateUserSELF]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#"><u>updateUserSELF</u></a>	Complex Type
<a href="#"><u>updateUserSELF</u></a>	Method

### **Definition**

[See updateUserSELF](#)

## **Element: token [type verifyFingerWithData]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">verifyFingerWithData</a>	Complex Type
<a href="#">verifyFingerWithData</a>	Method

### **Definition**

[See verifyFingerWithData](#)

## **Element: tokenStringx [type loginObject]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">loginObject</a>	Complex Type

### **Definition**

[See loginObject](#)

## **Element: trackingId [type demoData]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">demoData</a>	Complex Type

### **Definition**

[See demoData](#)

## **Element: type [type loginMessage]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">loginMessage</a>	Complex Type

### **Definition**

[See loginMessage](#)

## Element: updateUserSELF

### Derived By

Type [updateUserSELF](#)

### Content Model

Contains elements as defined in the following table.

Component	Type	Occurs	Description
SEQUENCE		1..1	
<a href="#">token</a>	string	0..1	Token
<a href="#">nin</a>	string	0..1	nin
<a href="#">surname</a>	string	0..1	surname
<a href="#">firstname</a>	string	0..1	firstname
<a href="#">phone</a>	string	0..1	Phone
<a href="#">email</a>	string	0..1	Email

## **Element: updateUserSELFResponse**

### **Derived By**

Type [updateUserSELFResponse](#)

### **Content Model**

Contains elements as defined in the following table.

<b>Component</b>	<b>Type</b>	<b>Occurs</b>	<b>Description</b>
SEQUENCE		1..1	
<a href="#">return</a>	<a href="#">loginMessage</a>	0..1	

**Element: userid [type accessType]****Derived By**

Type string

**Referenced By**

Name	Type
<a href="#">accessType</a>	Complex Type

**Definition**[See accessType](#)

## **Element: userID [type demoMapPermission]**

### **Derived By**

Type boolean

### **Referenced By**

Name	Type
<a href="#">demoMapPermission</a>	Complex Type

### **Definition**

[See demoMapPermission](#)

## **Element: userid [type loginMessage]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">loginMessage</a>	Complex Type

### **Definition**

[See loginMessage](#)

## **Element: username [type createToken]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">createToken</a>	Complex Type
<a href="#">createToken</a>	Method

### **Definition**

[See createToken](#)

## **Element: username [type createTokenString]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">createTokenString</a>	Complex Type
<a href="#">createTokenString</a>	Method

### **Definition**

[See createTokenString](#)

## **Element: username [type loginMessage]**

### **Derived By**

Type string

### **Referenced By**

Name	Type
<a href="#">loginMessage</a>	Complex Type

### **Definition**

[See loginMessage](#)

## Element: verifyFingerWithData

### Derived By

Type [verifyFingerWithData](#)

### Content Model

Contains elements as defined in the following table.

Component	Type	Occurs
SEQUENCE		1..1
<a href="#">token</a>	string	0..1
<a href="#">nin</a>	string	0..1
<a href="#">fingerStringInBase64</a>	string	0..1
<a href="#">pos</a>	int	1..1

## **Element: verifyFingerWithDataResponse**

### **Derived By**

Type [verifyFingerWithDataResponse](#)

### **Content Model**

Contains elements as defined in the following table.

<b>Component</b>	<b>Type</b>	<b>Occurs</b>	<b>Description</b>
 SEQUENCE		1..1	
<a href="#">return</a>	<a href="#">searchResponseDemo</a>	0..1
